

Jennifer Molson

Research Assistant, Ages Cancer Assessment Clinic, The Ottawa Hospital

Jennifer was diagnosed with Relapsing Remitting Multiple Sclerosis at the age of 21 in 1996. After multiple failed therapies, she took part in a clinical trial at the Ottawa Hospital funded by the MS Society Scientific Research Foundation involving stem cells at the age of 27. The trial was a stem cell bone marrow transplant to treat Early Aggressive MS as an auto immune disease.

As of 2006, Jennifer has actively been involved with the Stem Cell Network on the Research Management Committee as a Patient Advocate, as well as, with the Canadian Stem Cell Foundation since their inception in 2009, as their first volunteer.

Jennifer has a passion for stem cell research and speaking to the public about her experience being involved in a clinical trial.
