

## Trainee Communications Committee (TCC)

*The TCC plays an important role in the development of SCN's training program for young researchers.*

TCC members are expected to provide insight and recommendation on the types of workshops and skills development activities that would best support trainees in the stem cell and regenerative medicine research space, and actively participate in the organization and delivery of workshops and events related to the annual Till & McCulloch Meetings.

TCC members represent all stem cell and regenerative medicine trainees from across Canada to SCN management. TCC members are selected to ensure national representation and representation of all SCN areas of focus, including early translational research; clinical applications and translation; commercial and technology development; research into the ethical, legal, and social implications of stem cells and regenerative medicine; and policy development. TCC members are selected to ensure the Committee is representative of the diversity of Canada's stem cell and regenerative medicine community. **The term of membership of the TCC is 12 months, renewable. The next term of the TCC is April 1, 2023 to March 31, 2025.**

To be eligible to apply for membership of the TCC, **trainees must work in a Canadian university or research institute in the field of stem cells or regenerative medicine AND must be able to commit to complete the term April 1, 2023 to March 31, 2025.**
